RAJ VISHVAKARMA

Software Engineer | SDE Intern | C++ · Java · Kotlin | DSA · OOP · APIs

rajvishvakarma088@gmail.com | +91 9302618868 | Balaghat, Madhya Pradesh | github.com/rajvishvakarma088-star

PROFESSIONAL SUMMARY

Information Technology undergraduate (B.Tech, AI & Robotics) with C++, Java, Kotlin, DSA and OOP fundamentals. Built production iOS/Android features with Firebase-backed real-time data and MVVM, plus independent AI, geospatial tracking and concurrent automation systems.

TECHNICAL SKILLS

Languages: C++, Kotlin, Dart, TypeScript, SQL
Core CS Subjects: Data Structures & Algorithms, OOP, Operating Systems, DBMS, System Design
Software Engineering: Software Development, Clean Code, Software design, API development, Version Control
Backend & APIs: REST APIs, ,Firebase Authentication, Supabase, Node.js , Express.js
Databases: PostgreSQL/PostGIS, Firestore, SQLite, Room
Frameworks & Libraries: Android SDK, Jetpack Compose, Flutter, React Native, Riverpod, Playwright
Developer Tools: Git, GitHub, Android Studio, VS Code, Play Store & APK Deployment
Architecture: MVVM, Clean Architecture, State Management

EXPERIENCE

Founder & Software Engineer | *Metheus Lab* *(metheuslab.com)*

- Architect and ship independent SaaS/mobile products, owning application design, API layers, database design and authentication.
- Build features across UI and backend integration, then manage deployment and release of the finished products.

Flutter Developer Intern — Gravit InfoSystems Private Limited

Gwalior, M.P. | Apr-Jul 2026

- Developed and maintained Flutter features for production iOS and Android applications within MVVM architecture.
- Integrated Firebase Authentication for user management and Firestore/Storage for real-time data synchronization and file handling.

PROJECTS

- **Ultron AI** | *Android, Kotlin, Jetpack Compose, AccessibilityService, local STT*
- Built an Android computer-use agent in Kotlin and Jetpack Compose using AccessibilityService for app interactions.
- Added voice input and local speech-to-text to trigger AI-powered task execution.
- Structured asynchronous execution to coordinate tasks while keeping the Compose interface responsive.

- **Just Convoy** | *Flutter, Supabase, PostgreSQL/PostGIS, Riverpod*
- Built real-time fleet and convoy tracking with maps and background location telemetry.
- Used Supabase and PostgreSQL/PostGIS for geospatial tracking data and backend workflows.
- Managed live tracking state in Flutter with Riverpod.

- **E-Commerce RPA Engine** | *TypeScript, Node.js, Playwright, SQLite3*
- Built a parallel TypeScript/Node.js CLI that coordinates concurrent browser-automation workers for Shopify product imports.
- Implemented a transaction-safe SQLite queue that prevents duplicate job acquisition across workers.
- Automated scraping and Shopify UI uploads with Playwright to work around REST API bottlenecks.

- **Dealzy** | *React Native, Firebase, OpenRouter API*
- Built a cross-platform iOS and Android sales visit logger with React Native and Firebase.
- Integrated the OpenRouter API for AI-generated meeting summaries and visit insights.
- Reduced manual logging time by ~60% per visit.

ACHIEVEMENTS

- Solved 120+ Data Structures & Algorithms problems in C++ and Kotlin across time/space complexity analysis.

EDUCATION

B.Tech — Information Technology (AI & Robotics), Madhav Institute of Technology and Science, Gwalior

2023-2027 (Expected) | GPA: 7.9 / 10

Class 12: 88.4% | Class 10: 96%
